

Jordan Q. Sample

Software Engineer | Portland, OR | jordan.sample@example.com

Summary

Backend engineer with six years building Rust and Go services for small teams. Comfortable owning a system from design through on-call.

Experience

Example Logistics, Senior Engineer (2022 to present)

- Led the rewrite of the routing service from Python to Rust; p99 latency fell from 480 ms to 35 ms on the same hardware.
- Introduced a 32-bit ARM build for warehouse handhelds.
- Mentored three junior engineers; two promoted within a year.

Example Media, Engineer (2019 to 2022)

- Built the ingest pipeline for 40 TB/day of video metadata.
- Cut cloud spend 28% by moving cold storage to object tiers.

Education

B.S. Computer Science, Example State University, 2019

Skills

Rust, Go, Python, SQL, Linux, Kubernetes, Terraform, gRPC

Projects

tinyq (open source)

A single-binary message queue for embedded Linux; 2,100 stars.

Static site tooling

A build tool that renders 10k pages in under two seconds.
